Activity 2: Segmented Workforce Wellbeing Needs Assessment

Course C1158 · LO2

Objective

Identify the current health and wellness state of different employee groups using privacy-safe evidence

Documented real-event basis

Gallup frames wellbeing through career, social, financial, physical and community elements and links the employee experience to outcomes such as engagement, absence and retention. The framework is a lens for inquiry, not a diagnostic instrument.

Scenario

NorthQuay Services, a fictional 420-person firm, has a head office, a 24/7 contact centre and mobile technicians. Leaders want one annual wellness event, while employee feedback suggests different barriers by group.

Primary source

https://www.gallup.com/workplace/404105/importance-of-employee-wellbeing.aspx

Training assumptions

- All survey, absence, overtime, turnover and focus-group data in the activity pack are fictional.
- Groups with fewer than ten responses must not be reported separately.
- Operational indicators have multiple possible causes and cannot diagnose health conditions.
- The training dataset intentionally includes missing responses and unequal response rates.

Questions

1. What can each evidence source support, and what can it not support?
2. Which needs are shared and which differ by workforce group?
3. Where could response bias, small numbers or stereotyping distort the result?
4. Which two priorities should management address first, and why?

Expected output

Needs-assessment matrix and a two-priority management brief

Acceptance test

Every priority uses at least two evidence signals, small groups are suppressed, uncertainty is explicit, no condition is diagnosed, and recommended action addresses a workplace factor plus an access need.
