Activity 5: Whole-Person Wellness Programme Portfolio

Course C1158 · LO2

Objective

Design an inclusive portfolio for distinct employee needs

Documented real-event basis

The published VHA Whole Health model emphasises whole-person goals and values, health coaching, wellbeing programmes and clinical care within a wider system. It illustrates how an ecosystem can orient support around what matters to the person rather than a fragmented menu of services.

Scenario

HarbourView Hospitality, a fictional hotel group, wants one portfolio for 900 shift, office, food-service and facilities employees. Current offers are an annual health screen and ad-hoc fitness challenges with low shift-worker participation.

Primary source

https://pmc.ncbi.nlm.nih.gov/articles/PMC8168167/

Training assumptions

• HarbourView, workforce data and current service performance are fictional.

• The organisation can use HPB resources where eligible but must validate current programme terms before commitment.

• Employee groups differ in schedule, physical demand, language, financial concerns and digital access.

• Health screening results will not be shared with line managers.

Questions

1. Which shared and targeted needs should the portfolio address?

2. How will prevention, early help, support and recovery connect?

3. What makes each pathway accessible and trustworthy for shift employees?

4. Which components should be piloted, scaled, partnered or stopped?

Expected output

Whole-person programme architecture with component logic models and priorities

Acceptance test

Every component links to an evidenced need, the portfolio covers work conditions plus support, access is designed for distinct groups, clinical/privacy boundaries are explicit and each component has an owner and review measure.
