Activity 7: Participation and Partnership Recovery Plan

Course C1158 · LO2

Objective

Remove participation barriers and govern delivery partners for a sustainable programme

Documented real-event basis

The NCBI review highlights multilevel leadership, organisational alignment, programme scope and quality, accessibility, partnerships and communications as core elements, while identifying awareness, time, manager support, access, privacy and perceived benefit as participation barriers.

Scenario

SkyGarden Retail, a fictional 1,100-person business, pays for an EAP and wellness portal. Registration is 44%, first use 12%, repeat use 3%, and night-shift uptake is below 1%. Leaders propose a prize draw for registrations.

Primary source

https://www.ncbi.nlm.nih.gov/books/NBK201567/

Training assumptions

• All funnel, budget, vendor and employee-comment data are fictional.

• Registration is not evidence of benefit and may be a vanity metric.

• The vendor can provide privacy-safe aggregates but the current contract lacks response-time and accessibility standards.

• A S$35,000 budget can be reallocated across access, communication, manager release time and service capacity.

Questions

1. Where does the participation funnel fail for each workforce group?

2. Which barriers are awareness, access, trust, relevance, manager or service-quality problems?

3. Would the proposed incentive support or distort the intended behaviour?

4. What partner standards and experiment would restore sustainable participation?

Expected output

Participation recovery plan, vendor scorecard and budget-backed experiment

Acceptance test

The plan diagnoses funnel loss by group, addresses at least three root-cause categories, avoids coercive incentives, sets vendor quality/privacy standards and defines a measurable experiment with owner and stop rule.
